Project Part 8

Module

Website Development

Module Code

IT3040FP

Duration

6 hours

Title:

Maintain a Web Application

Objective(s):

At the end of the lesson, students will be able to perform version control as part of web application maintenance.

Tools, Equipment and Materials:

1   Development computer
2   Code editor

Instructions:

Part (A): Git Tutorial

1.   Follow the instructions at https://backlog.com/git-tutorial/intro/intro1_1.html to learn the basics of performing version control using Git as follows:
   1.1.   Install and set up Git
   1.2.   Create a new repository
   1.3.   Commit a file
   1.4.   Share a repository
   1.5.   Merge histories and resolve conflict

Part (B): Version Control using Git

1.   Use Git to perform version control of your project.
